## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 4, 5, 7 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Van Heugten et al. (US 5,713,915). Van Heugten discloses an ophthalmologic knife comprising a handle 82 and an end portion 46 (Fig. 15). The end portion 46' (Figs. 12 and 14) comprises a blade portion 54', a front tip, cutting edges 58, 60, and a guide portion 70', 72', 78', 80'. Fig. 14 illustrates the wedge shaped cross sectional slope on both the top and bottom surfaces. Fig. 12 illustrates that the guide portion 70', 72' is slanted towards the tip at a greater angle than the cutting edges 58' 60' are. The guide portion is generally in the form of an arc, continuing from one flat surface/straight portion 56' to another 56'.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Van Heugten. Van Heugten gives no importance to the inclination angles of the top and bottom surfaces. However, it would have been obvious to one of ordinary skill in the art at the time the invention was made to design the inclination angle of the bottom surface of the guide portion to be greater than the top surface (or any angle for that matter) to effectively and safely incise tissue.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Van Heugten in view of Anis (US 5,352,233). Van Heugten fails to disclose reflection prevention on the surface of the guide portion. Nevertheless, Anis discloses the use of treating the surface of the blade with reflective and light-absorbing portions to reduce glare. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to treat the surface of the guide portion with reflective and light-absorbing portions to reduce glare.

### ***Response to Arguments***

Applicant's arguments been considered but are moot in view of the new grounds of rejection.
